## PROFILE

Frontend Developer with over 3 years of experience building responsive and maintainable web applications using Vue, React, and Next.js. Experienced in integrating REST and GraphQL APIs, managing application state with Pinia, Vuex, and Context API, and developing reusable component-based interfaces.

I have worked on ecommerce platforms, internal management systems, and government websites, focusing on improving usability, optimizing workflows, and maintaining scalable code structures. Comfortable collaborating with backend teams to ensure reliable API integration and consistent data handling.

Focused on clean code, performance optimization, and delivering practical solutions that improve user experience and development efficiency.

---

## SKILLS

- **Frontend:** Vue 2/3 | Nuxt.js | React | Next.js | Angular | Shopify
  - **Programming languages:** Javascript | Typescript | Liquid
  - **State Management:** Pinia | Vuex | React Context API
  - **Api integration:** REST API integration | GraphQL | Axios | React Context API
  - **Styling & UI:** Tailwind CSS | Chakra UI | Mantine UI | Vuetify | Bootstrap | Next UI
  - **UX/UI:** Figma.
  - **Tools & Workflow:** Git | GitHub | Docker | Agile
  - **Soft Skills:** Communication | Team Collaboration | Time Management | Problem Solving | Adaptability.
  - **Core Strengths:** Reusable UI patterns | Modular project structuring
  - **Languages:** English Pre-Intermediate | Spanish Native
- 

## EDUCATION

Computer Systems Engineer

Instituto Politécnico Nacional (IPN)

---

## WORK EXPERIENCE

**Frontend Web Developer | Dinamic SW | February 2025 – June 2025**

- Developed and maintained a POS cash management system using React, focused on daily transactional operations and reporting.
- Designed reusable and modular UI components to standardize form handling and reduce duplicated logic across the system.
- Implemented structured validation flows to minimize user input errors and improve operational accuracy.
- Managed shared state using Context API to ensure predictable data flow across different views.
- Integrated REST APIs for real-time transaction updates and data synchronization.
- Collaborated closely with backend developers to validate data contracts and ensure stable integrations.

**Achievements:**

- Reduced development time by 30% through reusable component architecture.
- Increased form completion success rate by 40% due to improved validation and UX structure.

**Frontend Web Developer | Main Core SA de CV | October 2023 – August 2024**

- Developed and enhanced a responsive government platform using Vue and Pinia, ensuring compatibility across desktop and mobile devices.
- Structured frontend modules to improve maintainability and reduce tight coupling between components.
- Integrated REST APIs to ensure consistent data management across different administrative sections.
- Participated in cross-functional collaboration to align frontend functionality with backend requirements.

**Achievements:**

- Restructured menus, improved file uploading, and optimized information editing, making the process more intuitive compared to the previous software version.
- Recognized for effectively organizing project structure and implementing code reuse strategies.
- Spearheaded the redesign and streamlining of the file upload process.

**Frontend Web Developer | Overclock studios | February 2022 – September 2023**

- Built ecommerce and service-based platforms using React, Next.js (SSR), and TypeScript.
- Implemented secure payment integrations with Stripe and Square, ensuring reliable transaction processing.
- Connected frontend applications with Strapi CMS and REST APIs to enable dynamic content management.
- Applied SEO optimization strategies using SSR and structured metadata configuration.
- Contributed to UI/UX improvements through Figma-based collaboration and iterative design updates.

**Achievements:**

- Led redesign of Codisa's ecommerce page, improving user experience with enhanced features.
- Created an efficient internal payment visualization interface for Forprint.
- Redesigned Ourmaids' website, improving SEO and restructuring information.
- Integrated backend for Codisa, facilitating easy addition of banners or products and automated stock display.

**Frontend Web Developer | Ugusoft S de RL | March 2021 – January 2023**

- Developed a web platform using Vue, Nuxt.js, Vuex, and GraphQL, focusing on responsive design and usability.
- Implemented GraphQL-based real-time notifications to improve administrative monitoring.
- Designed and translated UI prototypes from Figma into production-ready interfaces.
- Supervised frontend development tasks and coordinated team activities as Department Manager.
- Supported performance improvements and structural refinements within the application.

**Achievements:**

- Optimized SEO (Website Impact Metrics) for 5-10 daily visits with fast load times.
  - Developed a user-focused internal page for verification, streamlining control and report reviews.
  - Implemented GraphQL notifications for instant real-time updates, improving admin efficiency.
-
